

PAUMONOK

Vol. 40, # 10

T.U. PHILOSOPHY

We believe that trout and salmon fishing isn't just fishing for trout and salmon. It's fishing for sport rather than food, where the true enjoyment of the sport lies in the challenge, the lore, the battle of wits, not necessarily the full creel. It's the feeling of satisfaction that comes from limiting your kill instead of killing your limit. It's communing with nature where the chief reward is a refreshed body and a contented soul, where a license is a permit to use not abuse, to enjoy not destroy our cold water fishery. It's subscribing to the proposition that what's good for trout and salmon is good for the fisherman and that managing trout and salmon for themselves rather than the fisherman is fundamental to the solution of our trout and salmon problems. It's appreciating our fishery resource, respecting fellow anglers and giving serious thought to tomorrow.

Tuesday, June 18 @ 7:30 PM **Elections** And A Short Presentation By ORVIS

It's June already! I hope everybody had an enjoyable Memorial Day Holiday. Mother Nature at least partially cooperated. I really hope you took some time out from your fun schedule to pay honor to our service men and women both past and present.

Our May outing to the Beaverkill is now history and it's time to get ready for our June outing. I was again unable to attend the May outing (again blame my wife) but it was reported that all went well. What could be bad with eating well, fishing, and hanging out with good people? Now start getting prepared for our next outing on June 7-9 also to the Beaverkill. My thanks go out to Bob Lutz and Jeff Plackis for planning these outings. Let's see someone new step up and plan an outing for next year. It's really not that complicated and someone with experience is always willing to help.

New York State Council TU chose to schedule a meeting in Roscoe the same weekend as our June Outing. A few of us will have to make the supreme sacrifice of giving up our Saturday morning and afternoon fishing in order to attend and bring back some pertinent information to our chapter. Please leave some fish for us. Perhaps we can convince the State Council to have it on a different weekend next year.

Thanks go out to George Douglas who spoke at our May Chapter meeting on steelhead fishing in the Great Lakes areas, plus he related some excerpts from his new book "The Fishing Gods". George seems to have gone through a personal ideological transformation since the last time I attended one his presentations a few years ago. He now approaches fishing and guiding on more of a cerebral level which is evident in his new book, "The Fishing Gods". George certainly puts forth a new level of consciousness to the sport of fly fishing and guiding. Thank you George for donating back to the chapter a portion of your book sales for that night.

Remember we are winding down our Chapter meeting schedule for the summer (no meetings in July and August), though your Board of Directors still meets in August. We still have a busy schedule. At the June Chapter meeting we will have our annual elections of officers and certain directors (see slate in this issue of Paumonok). Even though the Board has put forth a slate there is still one vacant director position to be filled and nominations can be taken from the floor that night. That night we will also be picking the winner of the special rod raffle that has been going on over the last few months. So come to the meeting with a few extra dollars in your pocket to buy a raffle ticket for a sweet new Orvis Clearwater 8'6" 5wt rod.

June also brings to a close my second year as President of Long Island Chapter of Trout Unlimited. Please allow me to take this time to thank you, the members, for your support this past year and my sincerest thanks to my Board of Directors for their hard work, dedication, and support. Enjoy the summer. Please keep in touch. Let me know any of your thoughts or ideas for future speakers, events, and projects. Get ready for some good projects next season. Remember to Conserve, Protect, and Educate. Make a promise to yourself and to me to volunteer some time at next season's LITU events and projects.

Respectfully,
Peter Harris

NEW MEMBERSHIP APPLICATION (for new members only)

Name: _____
 Address: _____
 City: _____ State: _____ Zip: _____
 Telephone: _____

Editors Notes

As I write this column on the eve of the June outing, I wonder out loud “June already? Where did May go?”

I remember years ago my parents telling me the “the older you get, the faster time goes by!” But come on now, for real? THIS fast?

I for one, can honestly tell you that statement is absolutely true.

It seems like just last week I was doing snow removal and taking the Christmas lights down. The week before that was New Years? Right? And wasn't Thanksgiving just a month or so ago?

I really think the reason that the statement rings true is because as we get “older”, our lives become busier than ever with kids, school, baseball games, work and everything else that life may choose to throw at us.

Especially with the technologies available to us today, we are always on the run, texting, talking, looking up, etc. When you come to think of it, how could we NOT be busy? We seem to always be in touch with someone.

Which is one of the major reasons I fly fish.

I fly fish to relax.
I fly fish for solitude.
I fly fish to get away from the contact of everyday life.
I fly fish to relieve all the stress and worries of life.

And, I fly fish for me, and my boys.

It's something that I love to teach them and enjoy doing with them, and them with me. It now becomes OUR time away from the “real world”. It's our time to really talk and listen to each other. A time to focus on just us.

In today's ever changing and hectic world, it's a time for enjoying just being together as a family.

It's about enjoying life.

Have a great summer.

DEC Free Fishing Days

Once again The New York State Department of Environmental Conservation is offering “free” fishing days.

During the last full weekend in June (June 29-30 this year), anyone may fish the fresh waters of New York State without a fishing license!

Saltwater anglers may also fish in marine waters or for migratory marine fish species without enrolling in the Recreational Marine Fisheries Registration.

This is the perfect opportunity to try fishing for the first time or take a friend or relative fishing. With more than 7,500 lakes and ponds and 50,000 miles of rivers and streams, there are plenty of places to try fresh water fishing in New York.

Visit the NYSDEC web pages “Where to Fish” for ideas on where to fish. Just getting started? Visit the DEC's “How to Fish” pages for advice on how to fish.

DEC Accepting Public Comments on Belleayre Mountain Projects

The New York State Department of Environmental Conservation is now accepting public comments on the draft revision of the Belleayre Mountain Ski Center Unit Management Plan and its draft Environmental Impact Statement (UMP/DEIS) as well as the modified Belleayre Resort at Catskill Park Supplemental Draft Environmental Impact Statement (SDEIS) for private development by Crossroads Ventures, LLC, the agency announced today. In addition, a Cumulative Impact Analysis and draft permits for the two related projects are also available for public comment through June 24, 2013.

The ski center is located on Forest Preserve lands under the jurisdiction of DEC, however Olympic Regional Development Authority (ORDA) began operating the ski center in November 2012. As the former operator, DEC began the preparation of this UMP/DEIS in 2008.

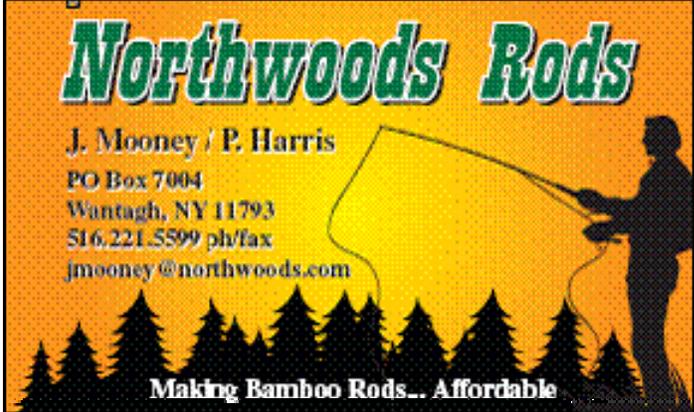

The draft revision of the Belleayre Mountain Ski Center Unit Management Plan/DEIS (Part A), the SDEIS for the proposed construction and operation of the Modified Belleayre Resort at the Catskill Park complex by Crossroads Ventures, LLC (Part B) and the cumulative impact analysis (Part C) are all part of the SEQR (State Environmental Quality Review) process needed for development in and around Belleayre Mountain.

DEC has scheduled an informational presentation of the proposed projects set forth in the draft revision of the Belleayre Mountain Ski Center Unit Management Plan on May 22, 2013, at 7 p.m. in the Discovery Lodge at the Ski Center located on Route 28 in Highmount, NY.

DEC has scheduled a public hearing on May 29 at the Belleayre Mountain Ski Center (Discovery Lodge), Route 28, Highmount, NY. The first session of the hearing will begin at 3 p.m. and the second session will begin at 6 p.m. Members of the public will be able to comment on the proposed projects.

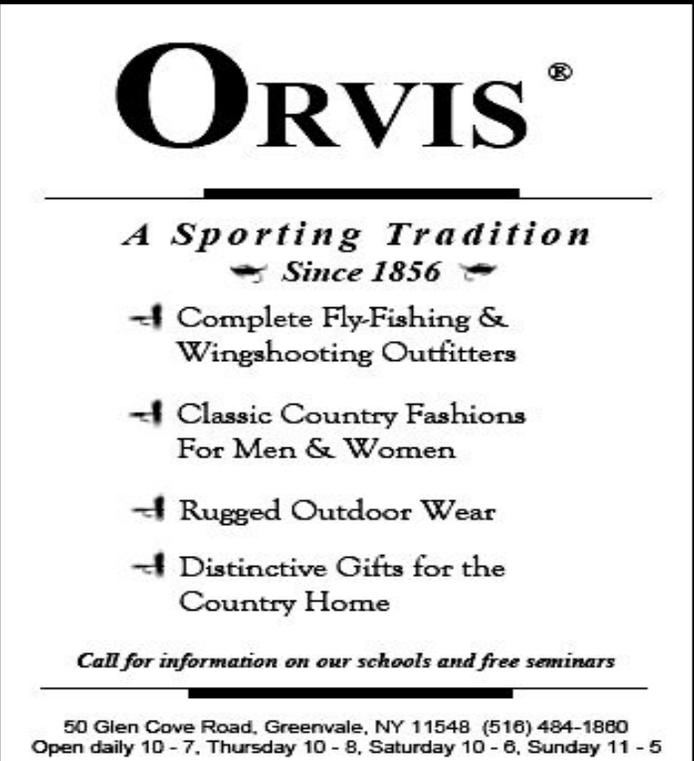

Written comments on the draft documents can be submitted through June 24 [by e mail](#), or mail to:

T.U. Tips

Practice During Slack Fishing Periods

During most fishing outings, there are periods of time when there are no hatching insects and the fishing is slow. This is a great time to practice your casting and fly presentation. There is no better place than on the water to do this. You can try double-hauls, right and left reach casts, S-casts, shock casts, etc. There is a lot written about these casts, but many anglers don't use them. Become familiar with the mechanics of these and practice them when the fish are not feeding. You will be glad you did.

Terrestrials After a Rain

After a rain, try terrestrials at any time of the season. The rain will usually wash ants, beetles, and other insects off the trees and into the stream,. In grassy areas in late summer, try grasshoppers and crickets as well. Use a stimulator pattern to imitate a moth or small hopper. And, don't forget to change patterns often until you find what the trout are looking for. *Bob Morrison*

A Trick to Taking Rising Fish

If a rising fish refuse your dry fly, try to time the fly to pass over the fish when it rises. It may be because the fish are actually feeding in the surface film or just beneath it. When this occurs, tie on a nymph or emerger pattern of the insect on which you think the fish are feeding and drift it over the fish. As the fly will be difficult and even impossible for you to see at times, tie on as small strike indicator about two feet above the fly. If the indicator moves abnormally or is pulled under the water, set the hook.

Remove Human Odors from Nymphs

A publication written by Dave Whitlock mentions a great tip on how to remove human odors from nymphs. It suggests that the nymph be rubbed on the underside of any rock found in the stream you are fishing.

Protecting Your Wallet

Put your wallet in a small zip lock bag to protect your valuables from getting wet if you fall in. Another suggestion is to wrap your wallet in "Saran Wrap" (or other) plastic wrap. You may find the plastic wrap is less bulky and more comfortable in your pocket. *Steve Doniger*

News and Views

DEC Announces Another New Brook Trout Record

Rick Beauchamp, of Mayfield, Fulton County, is the new holder of the state record for brook trout after catching a six-pound, 22.5-inch brook trout in Silver Lake on May 16, the New York State Department of Environmental Conservation (DEC) announced today.

Mr. Beauchamp reeled in the record-breaking fish while fishing Silver Lake in Hamilton County in the Adirondack's Silver Lake Wilderness. The new record brook trout, caught on a lake clear wabblor and worm, weighed in at slightly just more than 6 pounds, surpassing the previous state record set in 2012 by two ounces.

"Through Governor Cuomo's NY Open for Hunting and Fishing Initiative, DEC is promoting and expanding access for anglers," said Commissioner Martens. "I'd like to congratulate Mr. Beauchamp on this new record catch and encourage all New Yorkers to continue to utilize the great natural resources and fishing opportunities the state has to offer."

The brook trout is not only a success for Mr. Beauchamp, it also reflects the ongoing recovery of Adirondack lakes from the effects of acid rain. Until a few years ago, Silver Lake was too acidified to support a trout population. In 1969 the lake was determined to be fishless and in 1976 it had a pH of 5.0 which is too acidic for brook trout to thrive. After water chemistry samples indicated the pH of lake had risen to almost 6.0, DEC began an experimental stocking program for brook trout in 2002. Currently DEC stocks Windfall strain native brook trout in Silver Lake and brook trout are the only fish species known to be present.

Mr. Beauchamp submitted details of his winning catch as part of DEC's Angler Achievement Awards Program. Through this program, anglers can enter freshwater fish that meet specific qualifying criteria and receive official recognition of their catch and a distinctive lapel pin commemorating their achievement. The three categories that make up the program are: Catch & Release, Annual Award and State Record.

Information about the Angler Achievement Program including past winners and a downloadable application form, can be found on the DEC website or by contacting DEC Bureau of Fisheries by phone at (518) 402-8891

Trout, Mud, and the Roads Not Taken

By Heather Whitely

On an early July morning last year I woke up in a tent pitched next to the West Fork of the Bitterroot River, near Darby, Montana. This beautiful stretch of broadly flowing water boasts some of the best cutthroat and rainbow trout fishing and averages around 5,500 angling days a year. Unable to resist the temptation, I grabbed my fly rod and made a few casts. I wasn't there to fish, however, so I soon turned my attention to breakfast. After I had cooked up scrambled eggs and finished my coffee, my neighbors stepped out of their RV to assess the day. They eyed me narrowly as I pulled together my field gear and packed rebar survey stakes, measuring tape, and pvc pipe into the bed of my pickup. What, they may have wondered, was a woman—a very small woman—doing camping alone, especially when she was so obviously pregnant?

The answer is mud—mud in streams. More politely known as sediment. Protecting the Bitterroot watershed for trout means removing negative impacts and currently, that impact is sediment. It's true that sediment, largely caused by erosion, occurs naturally in a watershed within an undisturbed landscape. However, too much sediment can cover gravel areas and fill in pools, degrading habitats for both fish and insects. A primary source of excess sediment is the countless roads and trails that crisscross the landscape. The U.S. Forest Service is the largest landowner in the headwaters of the Bitterroot, and years of logging have left many miles of roads that are now abandoned and are actively eroding. Erosion harms twice—first by removing soil from a site and second, by depositing it on top of better soils or as mud in streams. So you can see that proper management of roads and trails is key to repairing damage to forested watersheds. That's why I was camping beside the Bitterroot last July. I'm in the road monitoring and removal business. When the Forest Service no longer needs designated logging roads and is willing to go through the public process to remove them, Trout Unlimited will provide on-the-ground support, from monitoring sediment impacts to managing the contractors that operate the heavy equipment. With my survey stakes and tape measure, I set up permanent monitoring areas (called transects) to measure vegetation establishment over time on roads slated for removal. In this way I can slowly measure nature reclaiming the land and determine how effective our actions have been in reducing erosion.

Although I'm still waiting for results to come in, one thing I do know from my experience, sometime it's easier to take a road than a trout!

T. U. Stream Explorers

What created your sense of wonder about the natural world? Do you remember an occasion from childhood when you first became enchanted by the free-flowing waters of a certain stream? There is a good chance that, as a child, you spent time with a family member or friend who shared their love of the outdoors with you. Like many others, your early experience grew into a passion to conserve those and other natural places.

All Kids Can Become Stream Explorers

Trout Unlimited's Stream Explorer membership offers kids a chance to learn about wild fish and the natural world. Now more than ever, kids need to be inspired to get outside and discover the fascinating life of trout and salmon and the rivers that sustain them. A Stream Explorers membership is a positive step toward creating the next generation of environmental stewards.

For Children Up to 12 Years Old

For elementary-aged kids, we focus on two things: a love of nature and a love of fishing. Members up to 12 years old will receive four issues of *Stream Explorers magazine*, which introduces them to the wonders of cold water and the fish that live there. Activities and experiments in each issue encourage the kids to go outside, find a stream or green spot, and engage with nature in a new way. Each Stream Explorer will also receive invitations from his or her chapter to attend any family events or fishing days. Member benefits also include the [Stream Explorers web-site](#), TU wall calendar, membership card, and stickers. Take a look at our [membership brochure](#) or directly [join today at our secure website](#).

For Youth 13 and Older

For teenagers, we continue to focus on fishing, and then help the youth translate a love of nature into conservation action. Teenaged Stream Explorers are invited by their local chapters to all fishing and conservation events. Most councils invite all the teens in the state to apply for their annual summer [Youth Conservation Camp or Academy](#), a weeklong immersion in conservation and fishing. These youth can learn to translate the leadership skills they gain into action at college, where they can organize a [5 Rivers College sub-chapter](#). All youth members (13 and older) also receive *Trout* magazine, stickers, a TU wall calendar, and a membership card. Take a look at our [Stream Explorers membership brochure](#) or [join today at our secure website](#).

For more information, contact streamexplorers@tu.org.

Nymphing For A Dry Fly Guy

By Tom McCoy

When you are anticipating a hatch and none materializes, you are left with a few choices. You can fish a dry fly hoping to entice a fish who is also waiting for a hatch; you can go with a streamer, forgetting about the possibility of a hatch and relying on the trout's preference for a more substantial meal than an insect can provide, or you can nymph. You could also find a sunny spot on the bank with a comfortable place to sit and reorganize your flies, tie on some new tippet and maybe do some bird watching while waiting for the hatch to occur. So there are choices.

Although I have always done some nymphing, it was never my method of choice. In recent years friend Peter walked me through the mechanics of his nymphing technique when we were out on Cabin Creek in Montana and I met with some success. Then I did some steel heading which helped me to appreciate the need to understand and work at what is affectionately known as "chucking and ducking."

Choosing to nymph is complimentary to fishing a dry since once nymphs are on the move it would seem logical that duns are not far behind. It puts you in the zone and keeps you focused on the ultimate goal (mine anyway – to fish a dry). It keeps you alert to what is happening under the surface so you know when it is coming; the hatch that is. This is often not the case. Hatches are like that. They tease you, so you nymph.

It is not my favorite. It is not dissimilar to a worm and bobber although there are more technical challenges in moving water of varying currents and depths as well as obstacles such as fly stomping stones, wayward branches and fly sucking logs hidden beneath the surface. I have found that there is more to know than meets the eye.

As always you need to postulate where the fish, that you cannot see, might be. Even the best presented nymph will do little good in an area where there are no fish. So you pick your spot. Perhaps where you had luck on a previous trip. Maybe just a likely looking run, deep pool or inviting riffle at the tail of a likely place. Anywhere the stream tends to concentrate its flotsam would be worth trying.

Once selected you need to pick the nymph of choice, based on what is likely to be hatching. Stone fly? May fly? Which color and size? Which pattern? To increase your chances for success a double (or triple) rig is helpful. A recent choice was a bead head Pheasant Tail followed by 12-14 inches of 5x tied to the bend of the hook and a Copper John. What size? It depends - maybe a size 12 in front and 16 behind to start. Once you catch a fish, note which fly they took and consider changing the one they didn't.

There are times you want weighted nymphs and other times you want un-weighted. (After all, how much do you think the natural weighs?) The idea is to get the nymph down to where nymphs live – generally on the bottom. So maybe the first fly is weighted to get the rig down and the second is not or the reverse.

How long of a leader? It depends. If fishing a deep pool where the flies will have to be down 6 - 8 feet, you will need a long leader; if in 3 foot water, much shorter. Nymphing also is more forgiving when it comes to strength and diameter of leader. 4x will do fine for the nymph whose dun may require a 6x on the surface.

Then there is the indicator. Some folks don't use any or rely on the colored tip on the fly line or a bright colored bit of leader material tied into the rig. I often use small foam tabs that fold over the line and have a florescent color. These are inexpensive and light to carry in the vest but they also are difficult to adjust and leave gooey residue on the leader once removed. More popular of late are "thing-a-ma-bobs" which are various size plastic bubbles that easily attach to the leader and can be adjusted with little effort. No matter how big or small they are, and no matter whether they are a tuft of wool or a plastic bubble, they are bobbers.

(Continued next page)

Two More Makes Five

(Continued from page 9)

So now you have this rig – leader of appropriate length and strength, indicator, selected nymph(s) and you have selected a location to try. Do you cast the fly upstream and across or do you cast it across from you and let it float down or do you cast it directly upstream of you? Yes. You do whatever it will take to get the fly on the bottom and moving through the water naturally. Do you avoid drag or do you use drag to your advantage? Yes. You do both depending on the situation. Focus on getting the fly on the bottom in a drag free drift with a tight line between you and the indicator. Anytime that indicator stalls, stops, wiggles, or dives, lift your tip (immediately!!) as fish will often take in a nymph and spit it out. Keep in mind that at some point a nymph becomes an emerger and rises to the surface – like your imitation does at the end of the drift. If you allow it to swing and rise at the end of each drift many, many times this is when the fish will hit so be patient and give it some time before re-casting.

So you are looking at a likely run and you are drifting your rig time and time again and the indicator doesn't even wiggle. No fish here? Maybe. Maybe not. If you are not getting an occasional false signal from your indicator that may mean that the nymph is not close enough to the bottom to interest the fish. You need to get it down until you start to get an occasional bump. You can slide the indicator up the leader a bit and/or change to heavier flies and/or add some additional weight in the form of split shot. Make one adjustment at a time and re-cast. If still no bump, make another adjustment. If you find on the first adjustment you are getting bumps and still no fish you can change fly type or size. Still no fish? Consider moving to the next spot.

When you move you will need to adjust the rig again to meet the characteristics of the water. If it is slower, deeper, shallower, full of obstructions, you will need to contemplate how to adjust the rig so you can present the nymph given the situation.

Sounds like a lot of work, huh? It is. Nymphing is not for the timid or lazy. It's technically much more complex than dry fly fishing which requires basically fly changes and tippet adjustments. Casting one of these rigs is also a challenge as you try to repeatedly flip a leader with indicator, weighted flies and maybe some split shot without getting them all knotted together.

Then there are the snags. Oh those snags! You make your adjustment and the nymph is in the zone, the indicator dives under, you strike hard and fast and now are connected to some unmovable object that is not giving back your fly. You do what you can to release it and end up breaking off some or all of the rig or it snaps back to you in a tangled mess that you try to unravel only to end up cutting it off and starting over. Wow – are we having fun now!

So why do it? Why nymph? Because it catches fish, like this bruiser Joe Odierna picked up on the Willow last April when no fish were rising.

LONG ISLAND CHAPTER, TROUT UNLIMITED

NOTICE OF 2013 ANNUAL MEETING OF MEMBERS

June 18, 2013, 7:30 p.m.

Notice is hereby given to the members of Long Island Chapter, Trout Unlimited (the “Chapter”) that the 2013 annual meeting of members (the “Annual Meeting”) of the Chapter will be held on Tuesday, June 18, 2013 at 7:30 p.m., at Hicksville VFW located at 320 South Broadway, Hicksville, NY 11801-5006, for the following purposes:

1. To elect to the Chapter’s Board of Directors (the “Board”) the Chapter’s officers for 1-year terms, beginning June 18, 2013, and to elect a non-officer director whose term is expiring for a 3-year term, beginning June 18, 2013. The Board intends to present for re-election the following five nominees: Peter Harris for President, Rick Lewis for Vice President, Tom LoProto for Treasurer, Mike Russell for Secretary, and Ed Ciano for Director; and
2. To transact such other business as may properly come before the Annual Meeting and any postponement(s) or adjournment(s) thereof.

Only current members are entitled to vote at the Annual Meeting. For purposes of the Annual Meeting a Chapter member is a “current member” if his or her annual dues to Trout Unlimited are paid as of the close of business on the date of this Notice.

The Chapter is pleased to utilize the provisions of its bylaws that allow this Notice to be posted on its website. The Chapter believes this allows it to provide you with the information you need while lowering the costs of delivery and reducing the Environmental impact of the Annual Meeting.

Please join us in person at the Annual Meeting.

Sincerely,
/s/ Mike Russell
Mike Russell
Secretary
Hicksville, New York
May 2, 2013
